OBJECTIVE

Software Engineer (Full Stack) with 4+ years of experience building scalable web applications using JavaScript (ES6+), TypeScript, React.js, and Node.js. Skilled in developing RESTful APIs, database design (PostgreSQL, MySQL), and delivering end-to-end solutions with a focus on performance, scalability, and user experience. Seeking to contribute to high-impact products in a collaborative, fast-paced environment.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python
Frontend	React.js, Redux, Redux Toolkit, HTML5, CSS3, Responsive Design
Backend	Node.js, Express.js, RESTful APIs
Databases	MySQL, PostgreSQL, MongoDB
Architecture	Component-Driven Architecture, API Design, State Management, OPP
Tools	Git, GitHub, GitLab, Docker, Linux, AWS, Data Structure & Algorithms
AI Concepts	Retrieval-Augmented Generation (RAG), Vector Databases, Prompt Engineering, LLM

PROFESSIONAL EXPERIENCE

Software Engineer Kochar Tech	May 2022 - June 2026 <i>Gurugram, Haryana</i>
---	--

- Engineered a high-throughput bulk data ingestion pipeline in Node.js + MySQL processing 30,000+ records per upload, reducing average report generation latency by 40% and enabling real-time analytics across 3 internal business units.
- Implemented client-side caching with React Query to eliminate redundant API calls across the dashboard, cutting average page load time from 2.3s to under 900ms and reducing server request volume by 60%.
- Delivered the full frontend system as the sole Full Stack contributor within a 2-month timeline, owning component architecture, API Design & Integration, and cross-browser QA — shipped to production with zero P1 bugs at launch.
- Built a debounced search and filter engine in React.js handling 10,000+ row datasets, throttling API calls by 70% and improving UI input responsiveness from 400ms to under 80ms — measurably reducing user-perceived lag.
- Designed and implemented reusable PDF templates using Puppeteer, enabling multi-company branding (logos, formatting) and reducing manual customization efforts

PROJECTS

Sampark: Built a scalable HRMS using Node.js and PostgreSQL with RESTful APIs for attendance, leave, TRF, separations, OT/UT, and complaints; used by 5000+ daily users, reducing HR manual workload.

EDUCATION

Bachelor of Computer Applications — Guru Nanak Dev University, Amritsar	2018–2021
Relevant Coursework: Java, Python, Database Management Systems, Operating Systems, Computer Networks
